

Session Setup

Before you start capturing you need to setup your session. First you have to open the Data Pane:

Press the plus - icon to **select a new session folder**. You need to create a new session inside your project on the internal drive D:

D:\01_Projects\YOUR-PROJECTNAME\Motive

If necessary create a new subfolders with a distinctive name with a date eg. Session_180329.

Then you need to remove all the other sessions from previous uses:

ATTENTION: PLEASE make sure you only REMOVE the folders. DO NOT DELETE THEM!!!

Set the blue flag to make sure your new session folder is active and all new takes will be stored inside this folder.

For more detailed information you can check the [official documentation](#):
