

# PARADOXES OF COPYRIGHT

**Week 42: 14 - 18 October, 2024**

Location: ZT 5.D02

## Abstract:

Contemporary art's relation to copyright is paradoxical. Copyright gives artists a claim of ownership over their own work. Yet, it enforces a type of individual original authorship that poorly fits contemporary artistic practices, which are often collaborative, generative, and building on the works of others. Since Dada, many avant-garde movements intended to undermine the notion of artistic control and originality. At least since the 1960s, numerous artists and activists have explored this paradox in their works, coming into conflict with copyright, exposing the weakness of its conceptual foundations in the digital domain, instigating collective practices and, recently, through blockchain-based mechanisms (NFTs) pioneered notions of "ownership" that seemingly abandons copyright entirely. In this module, we approach copyright not as fixed legal system, but as a contested cultural domain, in which artists play a key role in developing new models for 21st century. We will focus on artists such as Andy Warhol, Jeff Koons, Richard Prince, Cornelia Sollfrank, Elaine Sturtevant, and on movements such as "copy-left" and look into the strange case of the model Emily Ratajkowski who sold ownership rights to an image of herself she probably doesn't own. We will also look at the rise (and possible fall) of NFTs as the latest incarnation of the paradoxes of copyright.
