

About:

In the late 1960s, a series of landmark performances, such as Robert Rauschberg's "Open Score" (1966, NYC), exhibitions such as "Cybernetic Serendipity" (1968, London) and books, such as Marshall McLuhan's *Understanding Media*, marked a turning point in popular culture. Once esoteric notions of "information", "openness", "feedback", and "media" began to reach wide audiences and they were shaping new ideas about art and the artistic process. Indeed, to understand art as an open-ended process was a direct consequence of cybernetic thinking.

Cybernetics emerged after the second world war, as an attempt to rethink the changing relationships between people, animals, and machines. They were no longer perceived as fundamentally different from each other, but as being coupled in "open systems" and interacting with one another through "feedback". "Thinking", or "intelligence" no longer seen as the exclusive domain of self-conscious human beings, but was redefined as the ability to read and react to the environment. Thus, now also machines could be seen as thinking.

While cybernetics as a term fell out of fashion in the 1970s, its basic assumptions and ideas provide much of the common sense of today's techno-social worlds and remains crucial to understanding both artificial intelligence and social media.

In this module, we want to investigate the origin, transformations and continuing relevance of cybernetics, and the problematic ways in which it established an equivalence between humans and machines. We will read texts, watch movies, analyze art from the last 50 years. We will discuss all of this as it relates to the experiences of our own daily lives and artistic positions.

The module will be held in English.

Monday, Oct 21

Introduction:

- Who we are and what are our interests?
- Overview of the week
- Course Requirements
 - Presence
 - Participation
 - Written paper 2-3 pages, to be handed in by Sunday, Oct. 27

Input: Why does Cybernetics still matter?

Robert Rauschenberg: *Open Score* (1966), Video, 15 Min, & 18 Min Interviews

[Whole Earth Catalogue](#), 1968 (PDF)

Fred Turner - Keynote: [From Counter-culture to Cyberculture](#), HKW, 2013 (09:30-19:30)

Wiener, Norbert. 1948. *Cybernetics; or, Control and Communication in the Animal and the Machine*. Cambridge, MA: MIT Press. (reading together: p. p. 5-12 (basic concepts), 25-29 (artificial limbs and slave labor))

Tuesday, Oct, 22

Foundational Exhibitions

Cybernetic Serendipity, (Institute of Contemporary Arts, London, 2.8.-10.10.1968)
