"we understand the term language model (LM) to refer to systems which are trained on string prediction tasks: that is, predicting the likelihood of a token (character, word or string) given either its preceding context or (in bidirectional and masked LMs) its surrounding context." (Bender et al., 2021, p. 611)

Exploring Bias by artistic means

[Mediengruppe Bitnik, State of Reference](#), 2017

Group Work

- create groups of ~4 people
- play around with ChatGPT to document a specific bias /misinformation (30 minutes)
- brainstorm an application by which to make use of this bias/misinformation at scale (30 minutes)

- Make a short (5-minute) presentation on the bias and it application for (ab)use
